## Drone Test and Development Centre

The Drone Test and Development Centre (DTDC) at Westcott Venture Park provides a safe, real-world environment for companies to test and develop drones, their applications, and their procedures. The facilities offered include three 300m<sup>2</sup> hangars dedicated as workshop spaces for UAV companies, with flexible workbench options for those looking for short term leases. The resurfaced 270m runway also offers four dedicated landing pads for vertical, or vertical to horizontal take-off. The DTDC is an ideal location for unmanned specialist Companies to test and develop their vehicles and sensors. Companies can test their capabilities without coming into conflict with other air users and due to our multiple flying areas, low residential density and no conflicting traffic, users are able to remain clear of uninvolved persons or third parties.

There are also future plans for the site development to include Beyond Visual Line Of Sight (BVLOS) capabilities and pilot training. On site there is access to the welfare unit, including kitchen facilities and parking, plus access to the Business Incubation Centre with available meeting rooms for use to give you a collaborative and quiet setting to meet with clients, investors, or collaborators.

“ Whether you are a start-up, SME, or prime in the UK space industry, we have the expertise, experience, and technology to help you bring your ideas to life quickly and efficiently. Contact us to learn more about how we can support you in prototyping and development. ”
